

Share Data Between Components

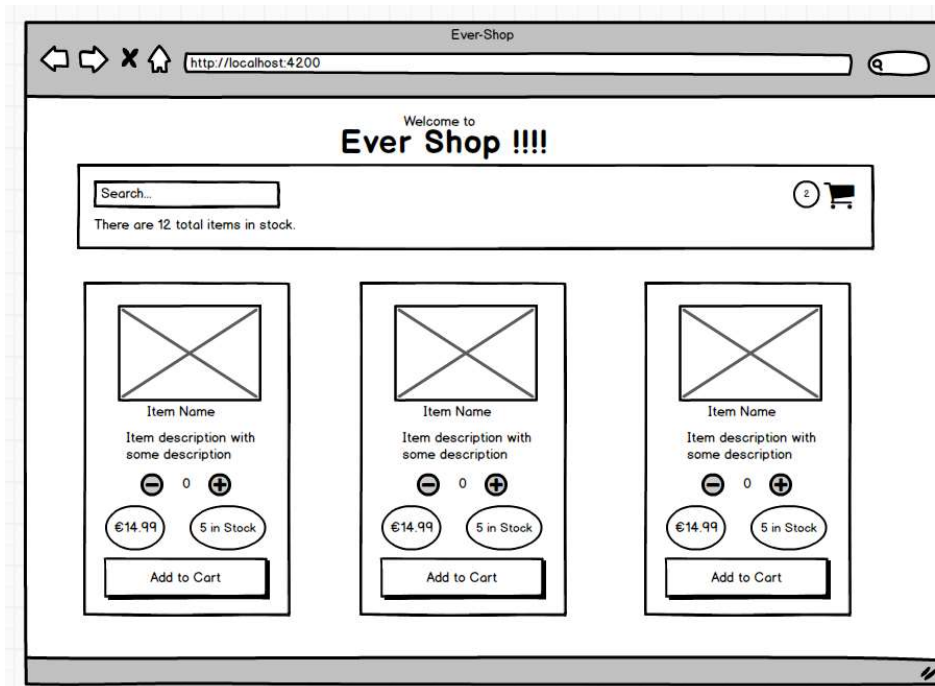

We need to pass information when we go to a new route. But we don't use any HTML like [tag] which interacts between HTML and Component. **HOW?????**

```
import { Injectable } from '@angular/core';
import { Cart } from './cart.model';

@Injectable()
export class CartService {
  cart: Cart;

  constructor() { }
}
```

```
import { Injectable } from '@angular/core';
import { Cart } from './cart.model';

@Injectable()
export class CartService {
  cart: Cart;

  constructor() { }
}
```
